EDUCATION

Texas A&M University

Master of Computer Science, GPA: 4.0/4.0

College Station, TX

Aug 2023 – May 2025

RV College of Engineering

Bachelor of Engineering, Major in Computer Science, , GPA: 3.91/4.0

Bengaluru, India

Aug 2017 – May 2021

EXPERIENCE

Software Developer

Texas A&M Transportation Institute

March 2024 – Present

Bryan, TX

- Created a framework to analyse 1M data points through optimized preprocessing and parallel processing techniques in Python
- Developed a full-stack search engine application, flood-finder, using NodeJS, React, PostgreSQL, and AWS
- Deployed the application to public cloud using AWS Elastic Beanstalk service
- Integrated Redis Cache into the Flood Finder 360 application, reducing the average search API response time by 30%
- Reduced AWS service costs by 5%, optimizing S3 storage life-cycle policies

Software Engineer

Cisco Systems

Aug 2021 – July 2023

Bengaluru, India

- Designed and implemented a highly scalable microservice to generate bill of materials for Optical Network Planner system using Spring Boot and Java
- Identified inefficiencies in network accessibility and addressed them by developing a real-time monitoring system using React and Django, resulting in a 98.33% increase in accessibility and having a direct impact on operational efficiency
- Completed 50+ code reviews, providing constructive feedback to enhance code quality and ensure adherence to best practices
- Decreased the network failure detection time by a factor of 33.3% by optimizing the scheduling algorithm of optical line systems

Software Engineer Intern

Cisco Systems

Feb 2021 – July 2021

Bengaluru, India

- Increased optical network testing efficiency by 300%, using a modular end-to-end test automation framework built using Python
- Implemented RESTful APIs using Django to abstract embedded system device access
- Built a CI/CD pipeline using Jenkins to efficiently integrate vendor firmware
- Detected and fixed 10+ firmware bugs using an automation framework, improving software quality
- Managed and owned the end-to-end project

PROJECTS

EleetNavigator | Python, Flask, React, MongoDB

March 2024 – May 2024

- Created a full-stack recommendation system using Flask as Backend and React as Frontend
- Implemented Google OAuth to authenticate users
- Designed Restful APIs to serve recommendations to the frontend clients

Sentiment Analysis on Yelp Review Dataset | Pytorch, TensorFlow, Machine Learning

Sept 2023 – Dec 2023

- Pre-processed, sanitized, trained and evaluated a RoBERTa-GRU hybrid AI model to discern positive, neutral or negative sentiment of Yelp restaurant reviews, attaining a F1 score of 0.885 and an accuracy of 89%

TECHNICAL SKILLS

Programming Language: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS (Web Development)

Web Frameworks: React, Node.js, Flask, Pytest, Spring Boot, Material-UI, Kafka, Maven, Gradle, Splunk

Developer Tools: Git (Version Control Systems), Docker, Amazon Web Services (AWS), VS Code, Visual Studio

Software Engineering Practices: Agile Development, Test-Driven Development

Interests: Distributed Computing, Natural Language Processing
